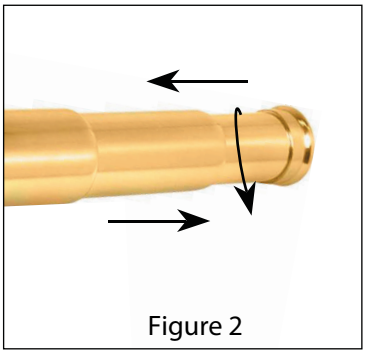

Figure 2

HOW TO ASSEMBLE YOUR SCOPE:

NOTE* Please be careful not to scratch your scope.

1. Carefully remove all the pieces from the box. Insert provided screw though bottom of the base, then into the stand.

2. Place mount on top of the stand, covering the exposed end of the screw.

3. While holding the base, stand and mount in place, turn entire assembly upside down.

4. While putting pressure on upside down mount, secure screw in place with screw driver. Turn entire assembly right side up.

5. Place scope on mount by gently pushing it between the holders. To separate scope from the base gently pull scope up, and away from holders to pop out. (See fig 1)

6. Mounted scope should look like image.

HOW TO FOCUS YOUR SCOPE:

1. Extend the scope to its full length.

2. Point the objective lens to the object and look through the eyepiece. Slowly turn the eyepiece, rotating back and forth until you see the object at its clearest. The image will come into focus gradually. (See fig 2)

4. Turn the lock knob to secure your viewing angle.

HOW TO TAKE CARE OF YOUR SCOPE:

1. When wiping the lenses, use a soft lens cloth.

2. To remove any remaining dirt or smudges, add one or two drops of isopropyl alcohol to the cloth, then wipe gently.

3. Store your scope in a moisture free area.
